Care and Maintenance

- Cover must be installed taut. Loose-fitting covers can cause excessive abrasion.
- Upon installation of springs, ensure they are taut as they will relax within several weeks.
- Inspect the springs periodically to make sure the springs are properly compressed (about halfway).
- Be sure to maintain the proper chemical levels in the pool during the winter.
- Water level must be within 12" of the cover during the snow season to help support the weight. Failure to do so will void the warranty.
- Read the warranty carefully as to its conditions and make sure the warranty card is completed and mailed to the specified address.
- When installing or removing the cover, make sure not to drag the cover over any abrasive surface and be careful not to catch the cover material on the springs or anchors.
- If pool edging or deck is sharp or abrasive, it is recommended that padding be used to protect the cover in those areas.
- Store the cover in the mesh bag provided and hang off the floor for drainage and protection when not in use.
- Flush out anchor casings with a hose when opening pool and spray the anchor screw with silicone prior to screwing it flush for the pool season.
- **SAFETY IS EVERYONE'S RESPONSIBILITY!** Our safety covers are built to meet or exceed every related safety and structural regulation governing their manufacture. However, it is the consumer purchaser's responsibility to follow all safety instructions provided with any safety cover and to educate all users of the product as to its safe and proper use.

AT NO TIME SHOULD ANYONE PURPOSELY ATTEMPT TO ENTER THE SAFETY COVER.
